How To Measure A Spa For A Replacement Cover

Tools Required: Tape Measure & Carpenters Framing Square

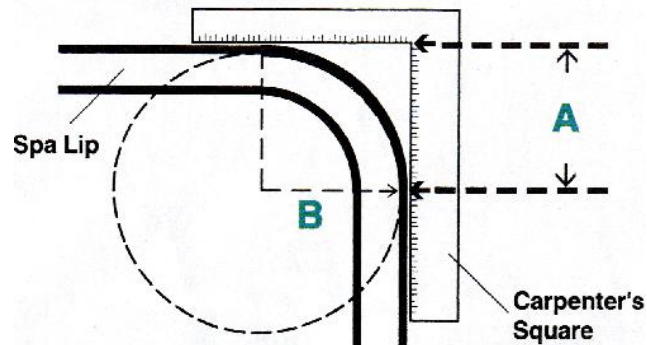

Step 1

First, use the tape measure to measure the outside length and width of the spa, as shown below. You may want to place a piece of wood vertically at each of the two outside edges, and measure between the two. This will make it easier to find the true outside edge. Use page 2 of this document, to record and submit your measurements. Please record all measurements in inches.

Step 2

Place the Carpenters Framing Square on the corner of the spa. The inch marking on the framing square where the framing square first makes contact with the spa, tells you the radius of the corner. If the framing square first makes contact at the 6 inch mark, the radius of the corner is 6 inches. In the event that the first place that makes contact is at a fraction of an inch, 5 & ½ inches for example, always round down to closest inch.

To Help Ensure The Best Possible Fit For Your New Cover, It Is Best To Take Measurements From The Spa, Rather Than The Spa Cover.

Please Provide All Measurements In Inches.

Measurement A (Overall Length) _____ Inches

Measurement B (Overall Width) _____ Inches

Radius Of Corner: _____ Inch

Color Of Cover Ordered: _____

Brand & Model Of Spa: _____
(If Known)

Customer Name: _____

Customer Tel: _____

Date: _____

Note:

If it is important that the spa cover fold a particular way, please indicate the direction of the seam using a dotted line, on the diagram shown above. If the position of the straps is important, please indicate on the drawing, how many inches from the centre of the wall, the strap should be.
